## Instruction for the decoration of picture frames with children

Picture frames come with a protective styropor frame as shown. Do not throw these in the trash! These frames can be reused for arts and crafts with groups of children. You only need the white glue which becomes clear when dry (hardware or office store). It is non-toxic and can be washed off easily.

A favored method to decorate these frames is the use of paper napkins which are simply glued to it. Start a collection of different napkin patterns to get a choice when selecting the motif.

Alternatively you can wind a thread such as Sisal around the frame. The ends are fixed at the back. When you glue a strong paperboard to the frame you can further design a 3D picture using seeds, sticks, beans or deco material from the arts & crafts store and produce an individual present for a favored person.

Have fun!
